

REAL WINDOWS DISPLAY

REAL WINDOWS. ANY BROWSER.

Turn a spare phone, tablet, or browser-capable screen into a real Windows display or a purpose-built HTML Deck.

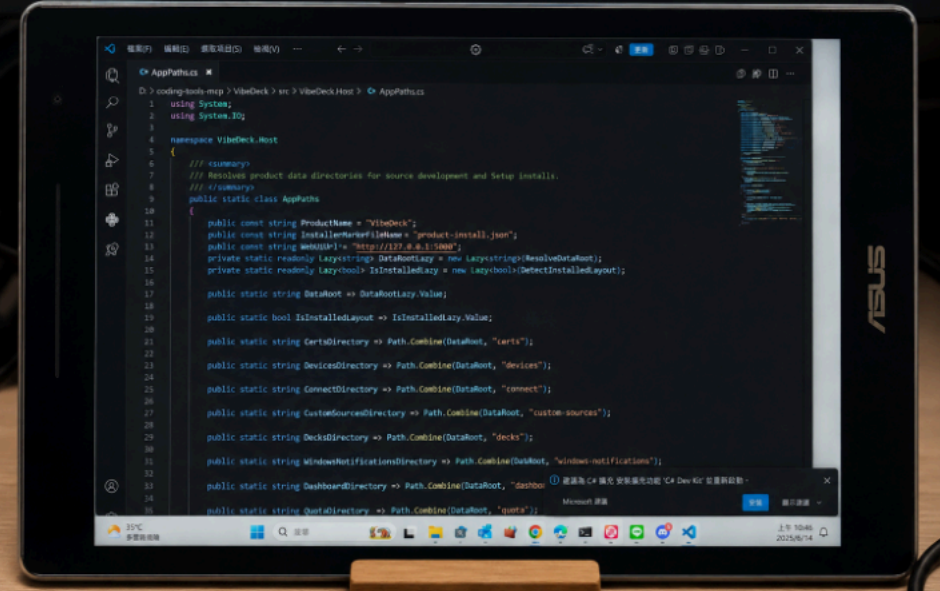

NO CLIENT APP REQUIRED

USE THE SCREEN YOU ALREADY OWN

ONE SCREEN. FIVE JOBS.

```
..Combine(DataRoot, "devices");
```

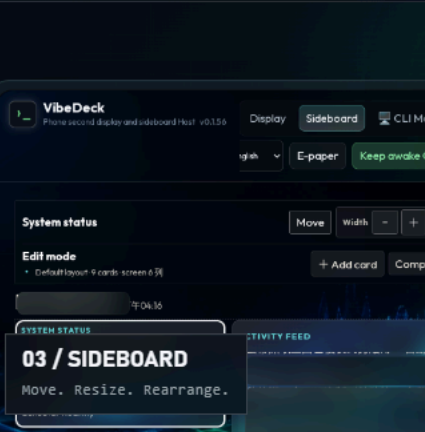

01 / REAL WINDOWS DISPLAY

A monitor, not a mockup.

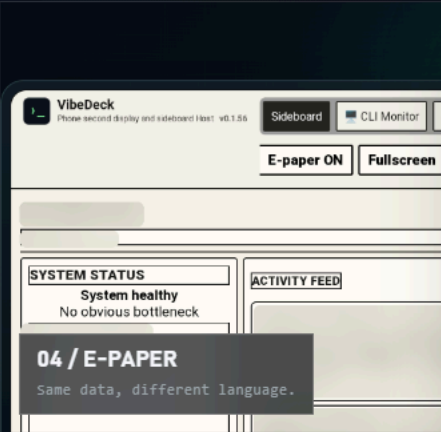

02 / CUSTOM HTML DECK

Ordinary HTML, CSS and JavaScript.

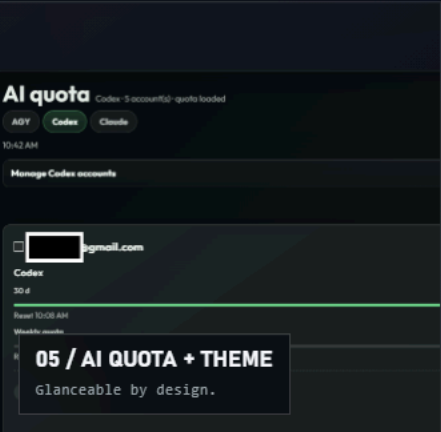

03 / SIDEBORD

Move. Resize. Rearrange.

04 / E-PAPER

Same data, different language.

05 / AI QUOTA + THEME

Glanceable by design.

REAL WINDOWS DISPLAY

A REAL WINDOWS DISPLAY. IN A BROWSER.

VibeDeck creates or discovers a Windows display, streams its pixels to the browser, and relays input back to Windows. Move an ordinary app onto the spare screen and use it like another monitor.

REAL PIXELS

Not a fake dashboard

BROWSER CLIENT

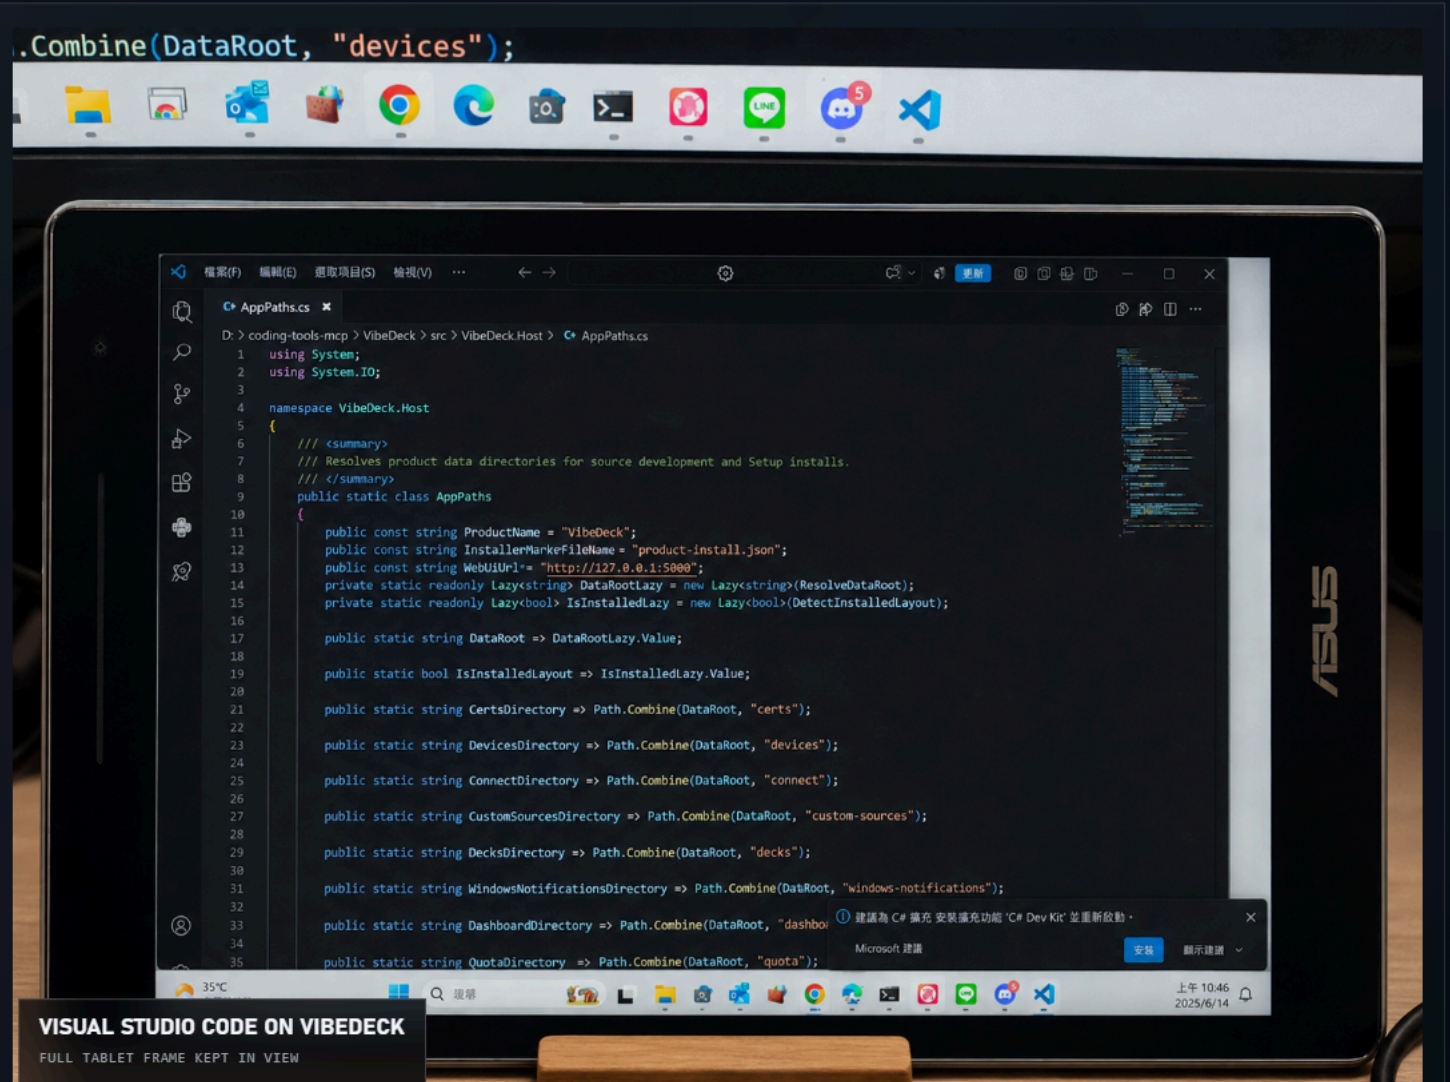

No device-side installer

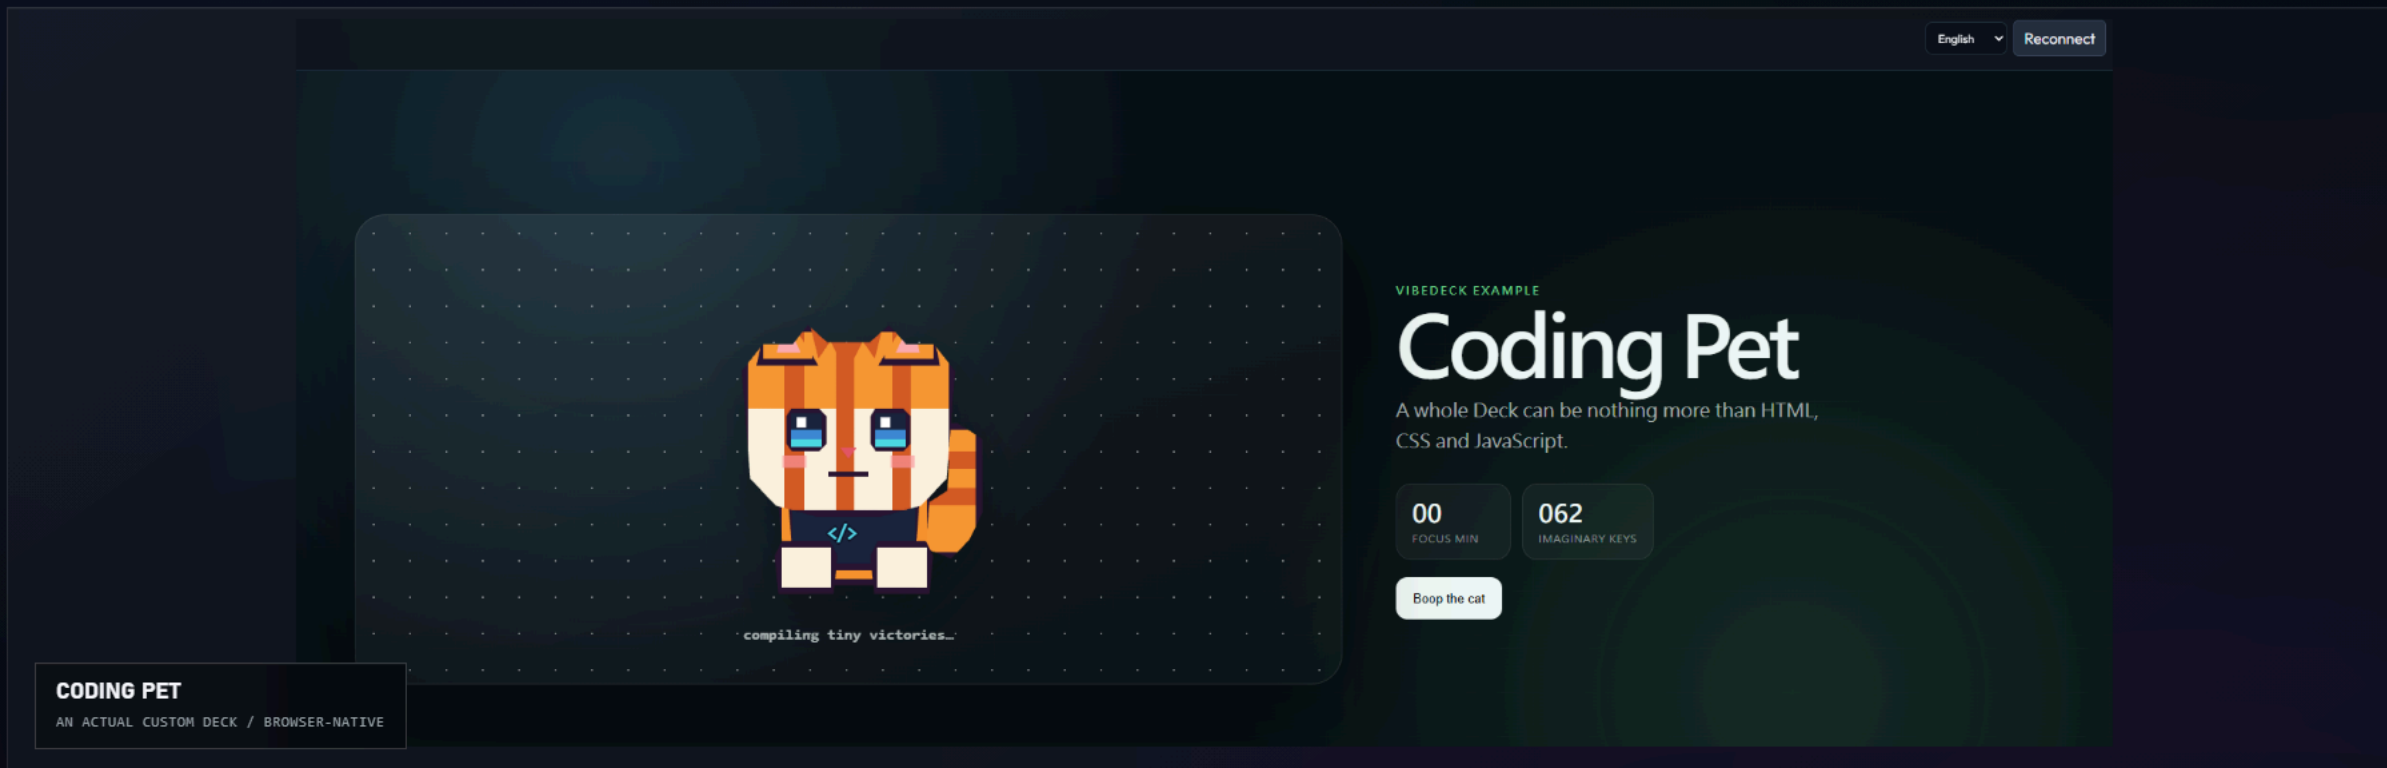

REMOTE INPUT

Keyboard and pointer path

LOCAL FIRST

WebRTC H.264 + JPEG fallback

WHEN PIXELS ARE THE WRONG TOOL

MAKE THE SCREEN YOURS.

A Deck is just normal web files rendered directly in the device browser. No native client. No locked template. The screenshot above is a real Deck built from ordinary HTML, CSS and JavaScript.

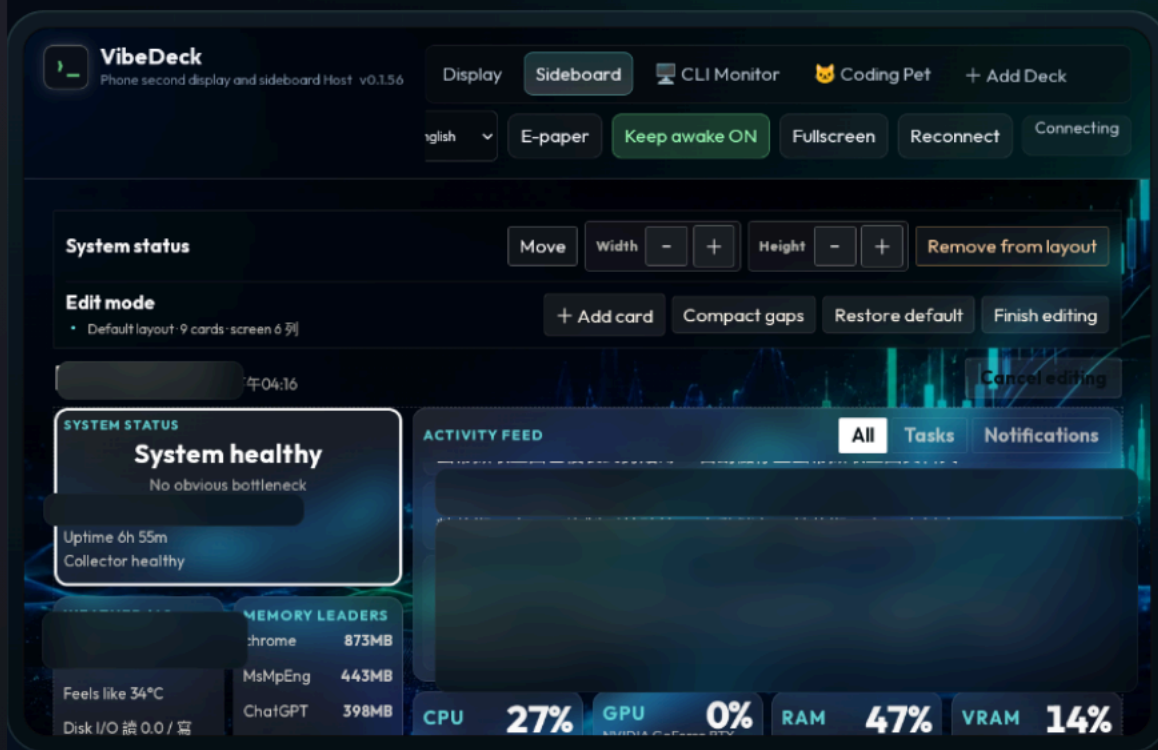

```
my-deck/  
├ deck.json  
├ index.html  
├ style.css  
└ app.js
```

BUILT-IN SURFACES

MOVE IT. RESIZE IT. SWITCH THE LANGUAGE.

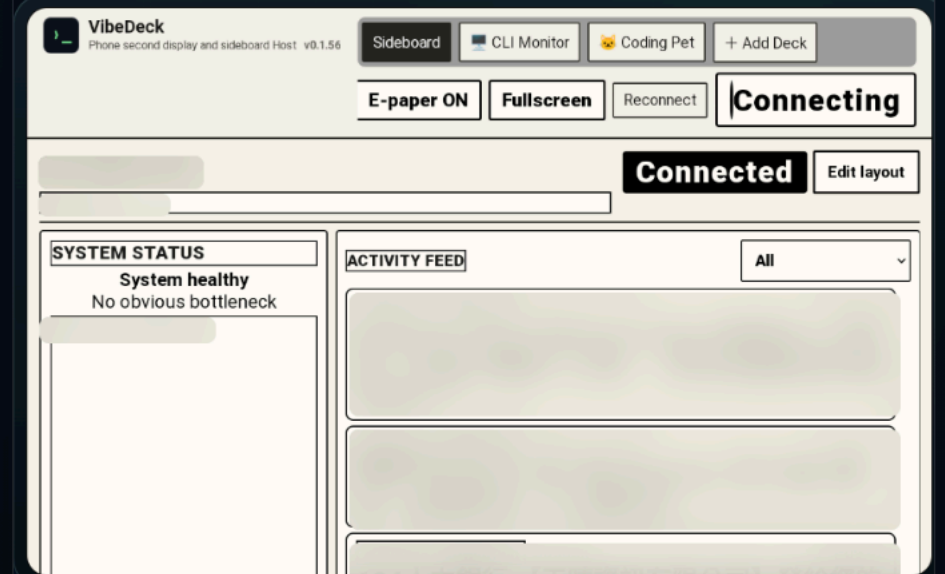

01 / SIDEBOARD

The edit controls stay visible in the frame: Move, Width, Height, Add card, Compact gaps, Restore default.

02 / E-PAPER MODE

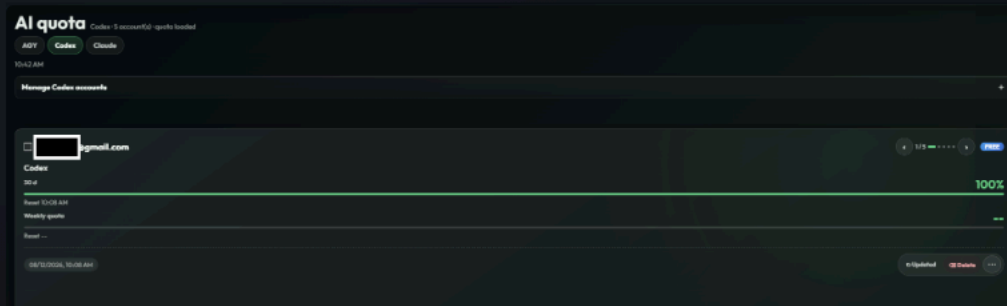

One tap switches the same Sideboard to a high-contrast, e-reader-friendly visual language.

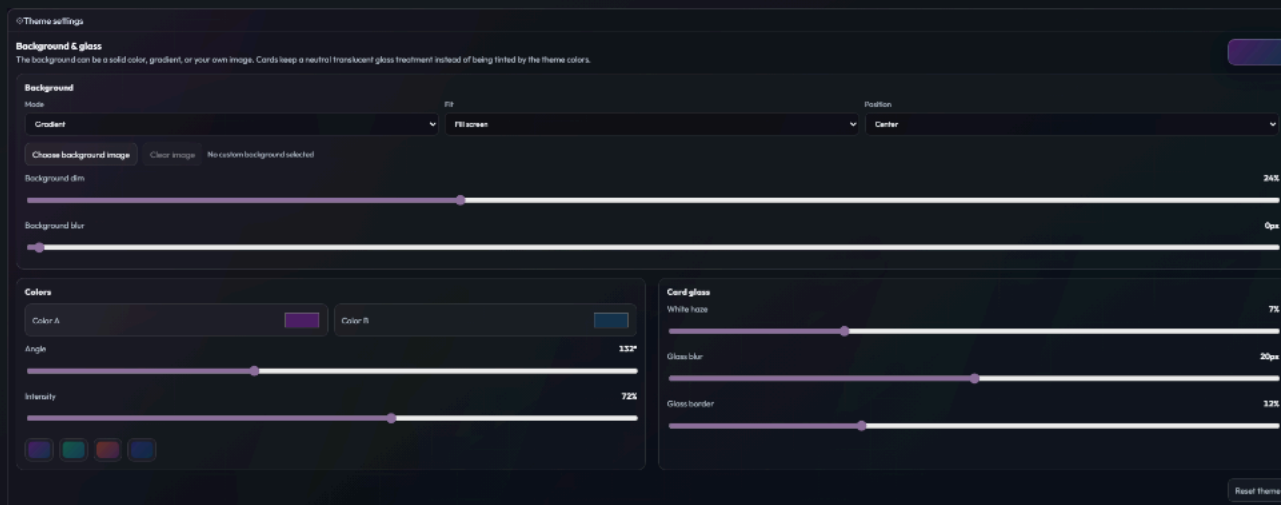

AI QUOTA + THEME

KEEP THE RIGHT THINGS IN PERIPHERAL VISION.

AI QUOTA Codex / Claude / AGY / reset windows

THEME Real Host appearance controls, not a mock palette

GIVE YOUR SPARE SCREEN A NEW JOB.

Not just screen mirroring. Not just a dashboard. A small-screen runtime for the devices you already own.
